

WHAT IS CLAIMED IS:

1. Apparatus comprising:

a) a self-service kiosk which dispenses articles, currency, or communication services; and

5 b) within the kiosk, a steerable-beam microphone array which points a microphone lobe toward the face of a customer, for receiving speech from the customer.

2. System according to claim 1, wherein the system further
10 comprises speech recognition apparatus for recognizing said speech.

3. Apparatus comprising:

a) a self-service kiosk which dispenses articles, currency, or communication services; and

15 b) within the kiosk,

i) a steerable beam microphone array, having multiple lobes;

ii) means for sampling lobes, and

A) identifying lobes having a relatively high speech content,

B) identifying lobes having a relatively low noise content, and

20 C) actuating a lobe having both a relatively high speech content and relatively low noise content.

4. Apparatus according to claim 3, and further comprising:

c) speech recognition means for recognizing speech contained in the
25 lobe actuated.

5. A method, comprising the following steps:

- a) maintaining a self-service kiosk which dispenses articles,
currency, or communication services;
- b) maintaining a beam-steerable microphone array at the self-service
5 kiosk;
- c) measuring noise content and speech content of several lobes of the
array; and
- d) selecting a lobe which carries
 - i) larger speech signals than other lobes and
 - 10 ii) smaller noise signals than other lobes.

6. Method according to claim 5, and further comprising the step of

- e) receiving signals from the lobe selected, and performing speech
recognition on the data.
